Important Technical Notes

- Please turn up video quality to 1080p; video footage will look very poor otherwise
 - Turning it to 1080p on the first video should make all future videos display properly as well.
- Google Slides cannot display ultra-wide videos correctly; all videos in this presentation are slightly horizontally squished.
 - Original unaltered videos are available for reference here:
 - [Original 4K Videos](#)
 - Video must be downloaded for correct aspect ratio

Primary Objectives

- Create visually compelling immersive content that follows brand guidelines
- Focused on non-photographic imagery
- Interesting but not overwhelming
- Designed not to overpower speakers and other presentation content
- Name badges and posters have been designed to match video concepts while maintaining text legibility at distances

Concept A: Gradients

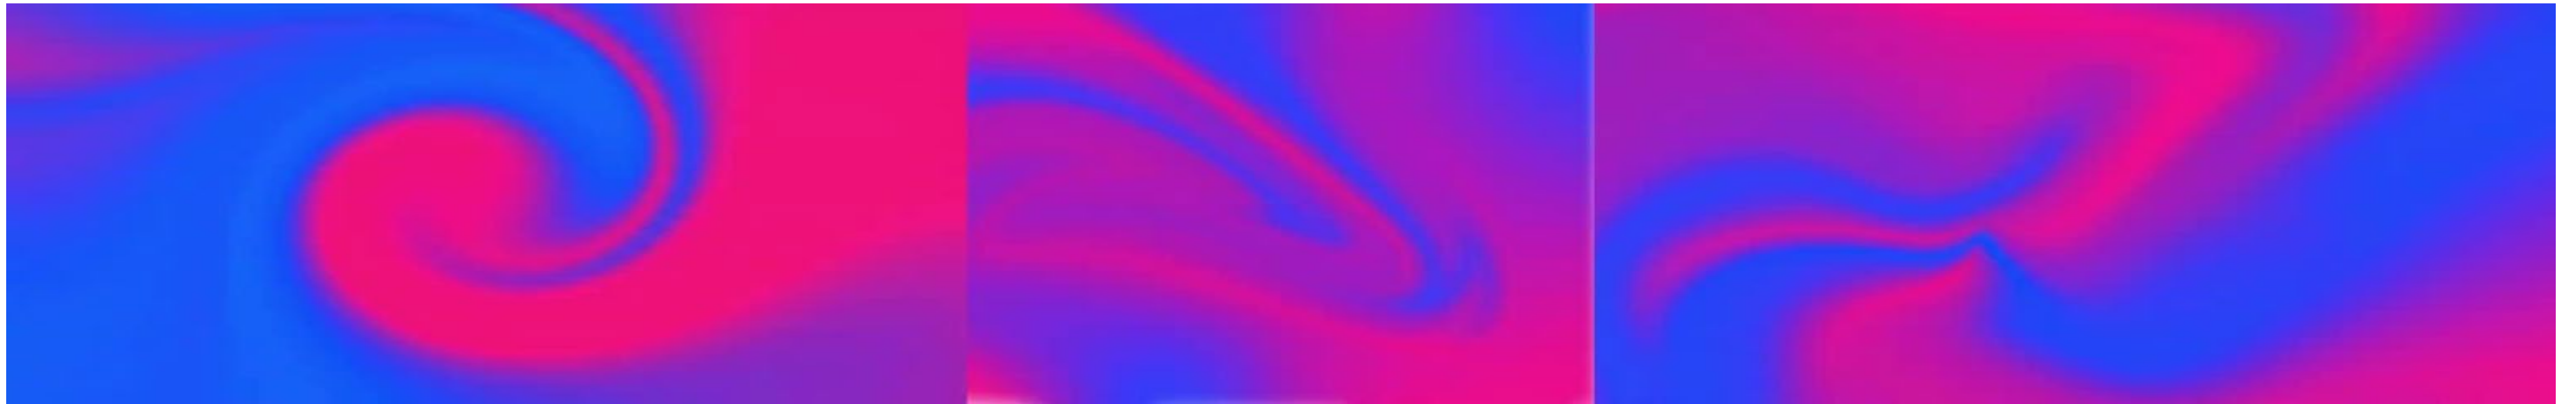

Venue mockup

Concept A: Gradients

- Utilizes official Vector gradients with AI animation interpolation
- Goes from official gradient 1 to 2 to 3 to 4, then back to 1 in seamless loop
- Current mockup features only magenta to cobalt gradient, but design can be applied to other gradients (teal to purple, orange to purple, etc.)
- Each wall receives its own gradient; stretching across 3 walls would look poor
- Name badges are separated into categories via gradient patterns and coloured rounded rectangles
- Posters use venue images, gradients, plus symbols, pixel symbols, and arrows to add visual pop while maintaining legibility.

Concept A: Gradients

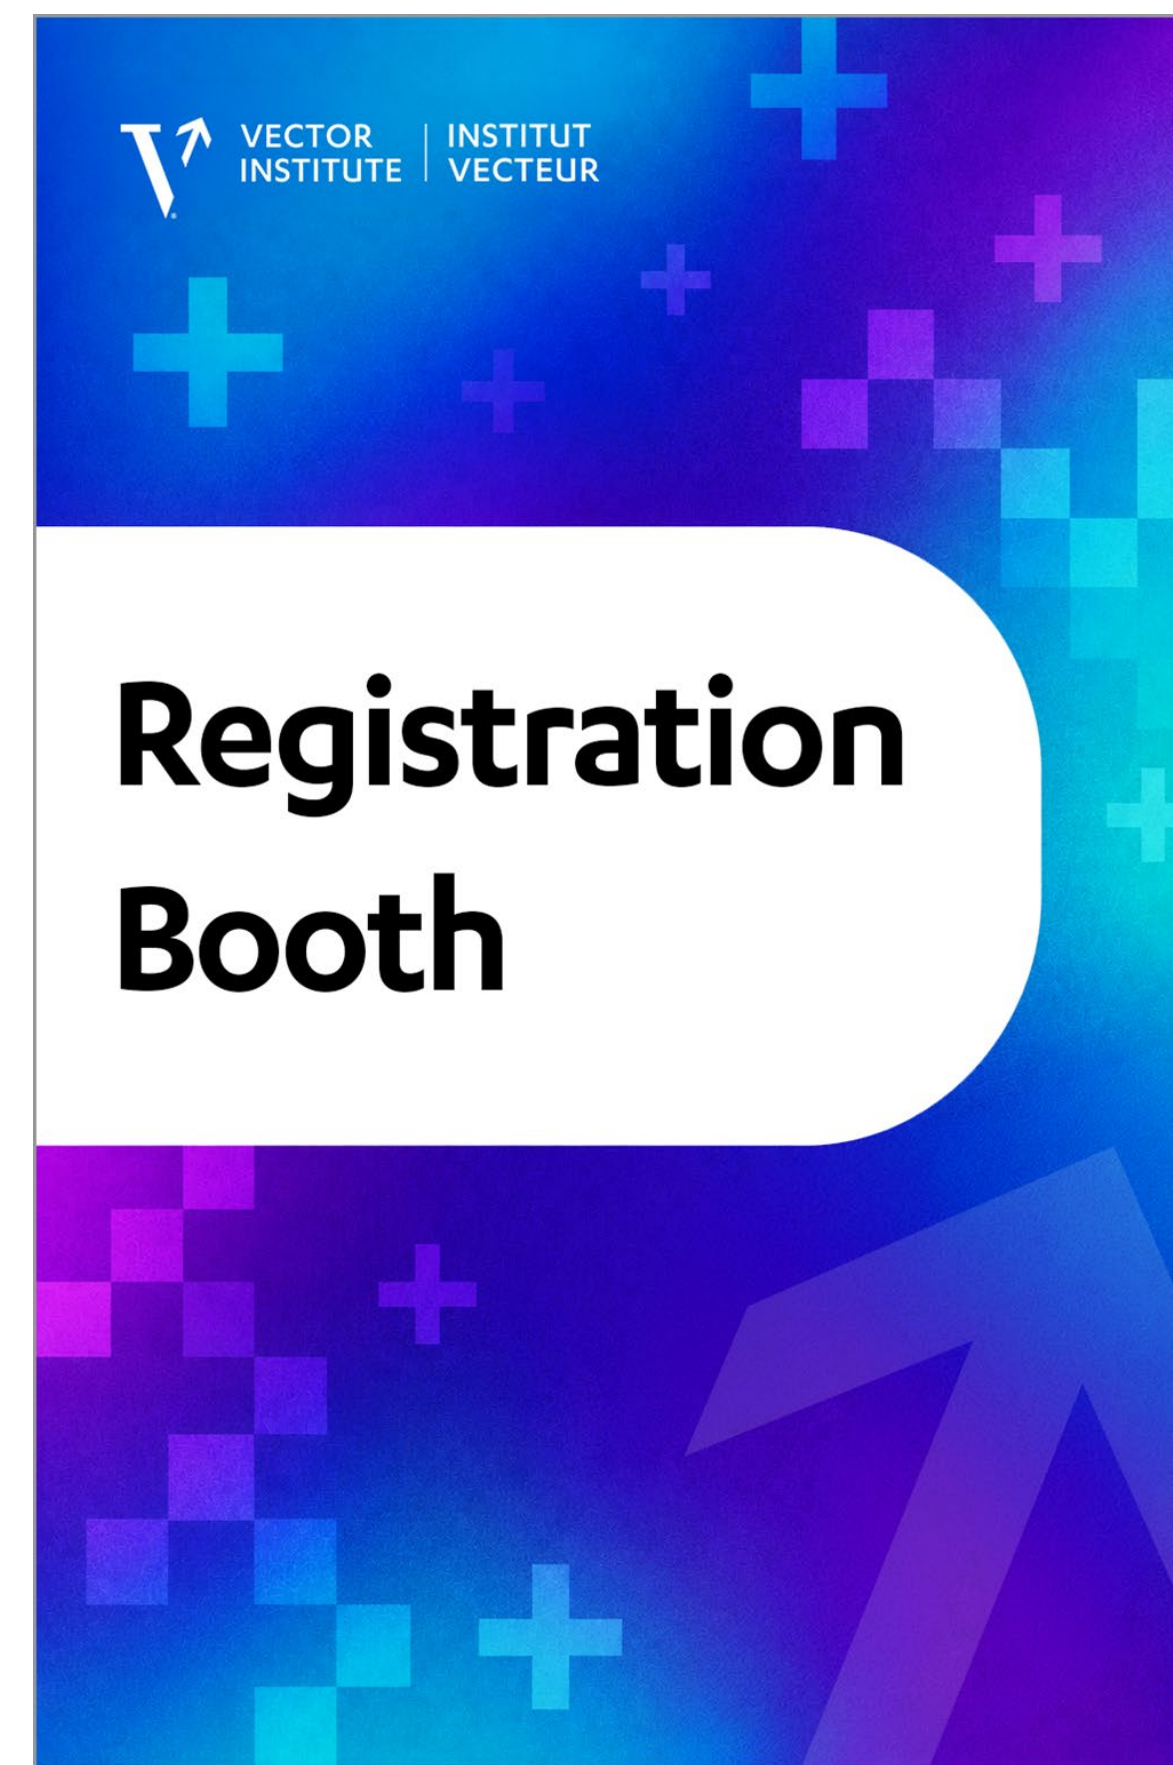

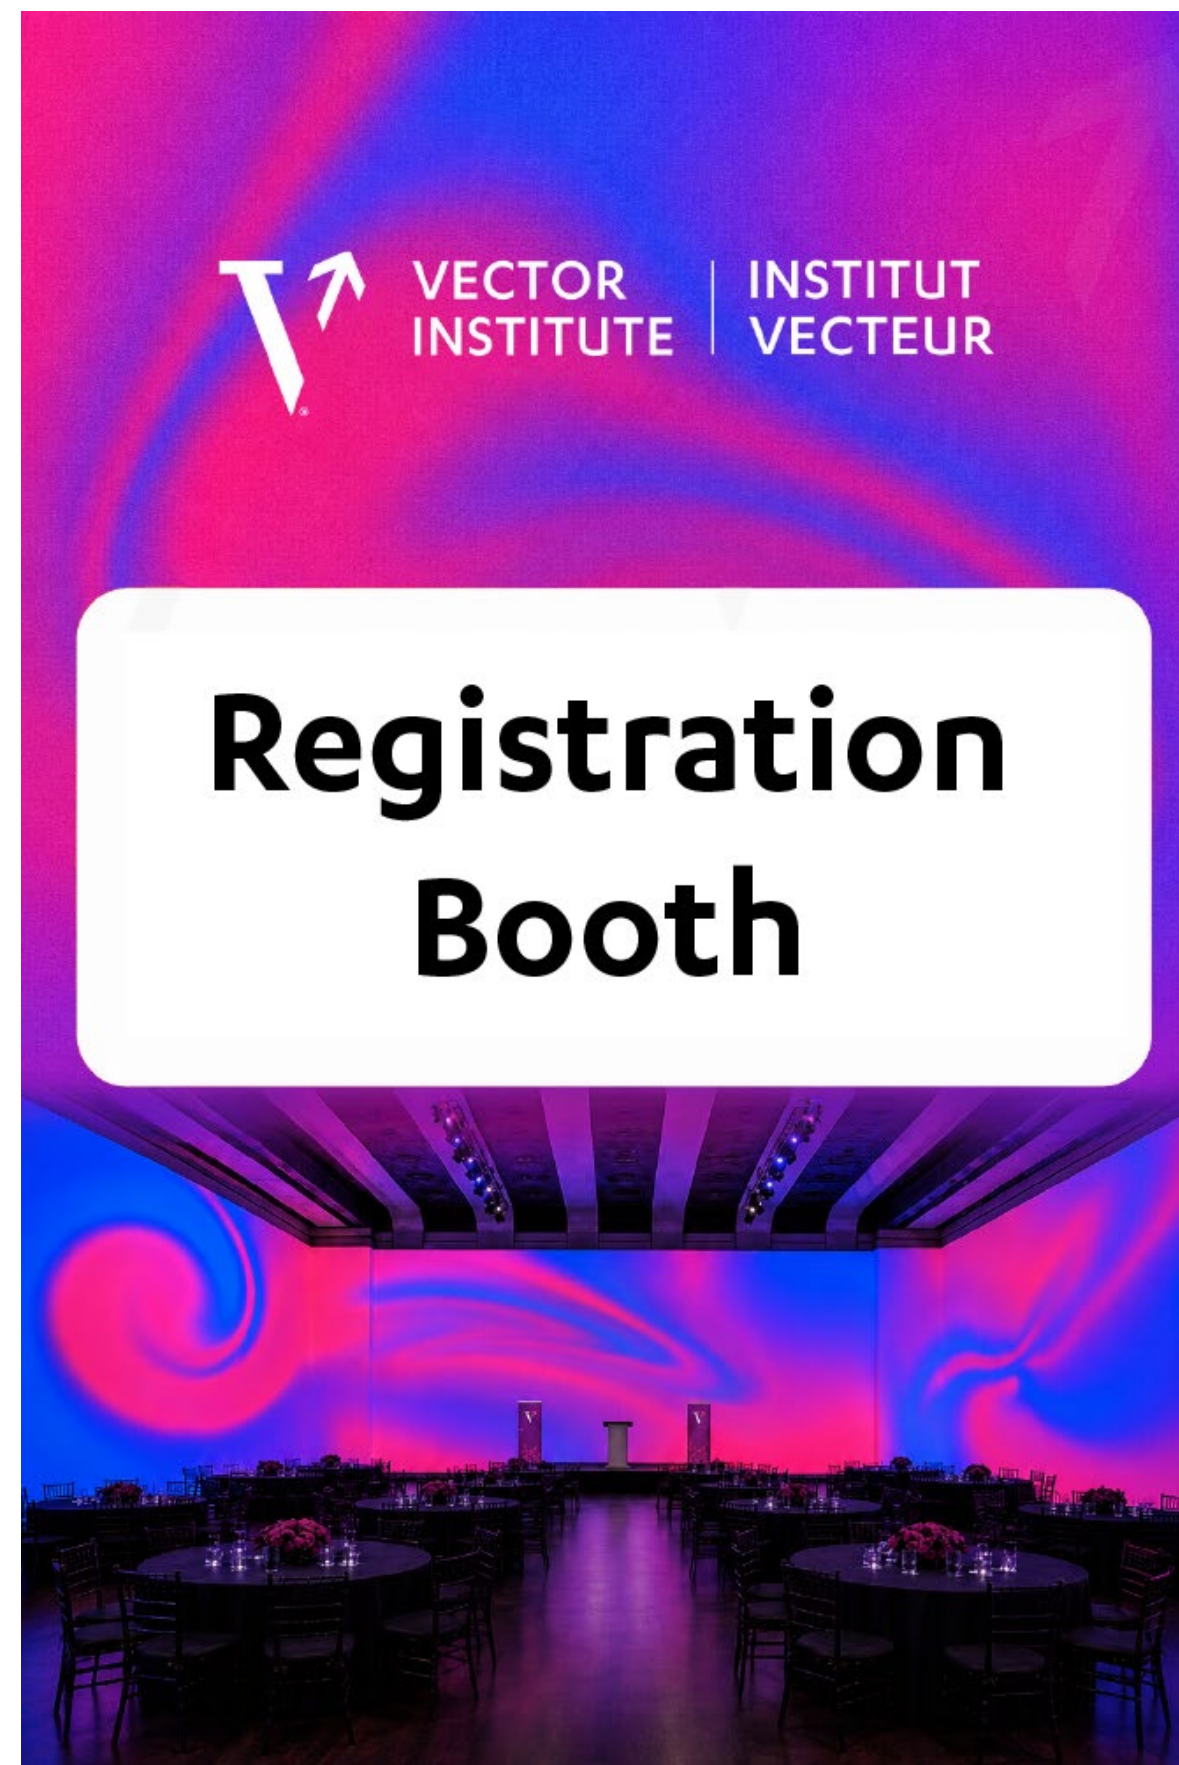

Video demonstration
(Click here to download [original video](#))

Concept A: Gradients

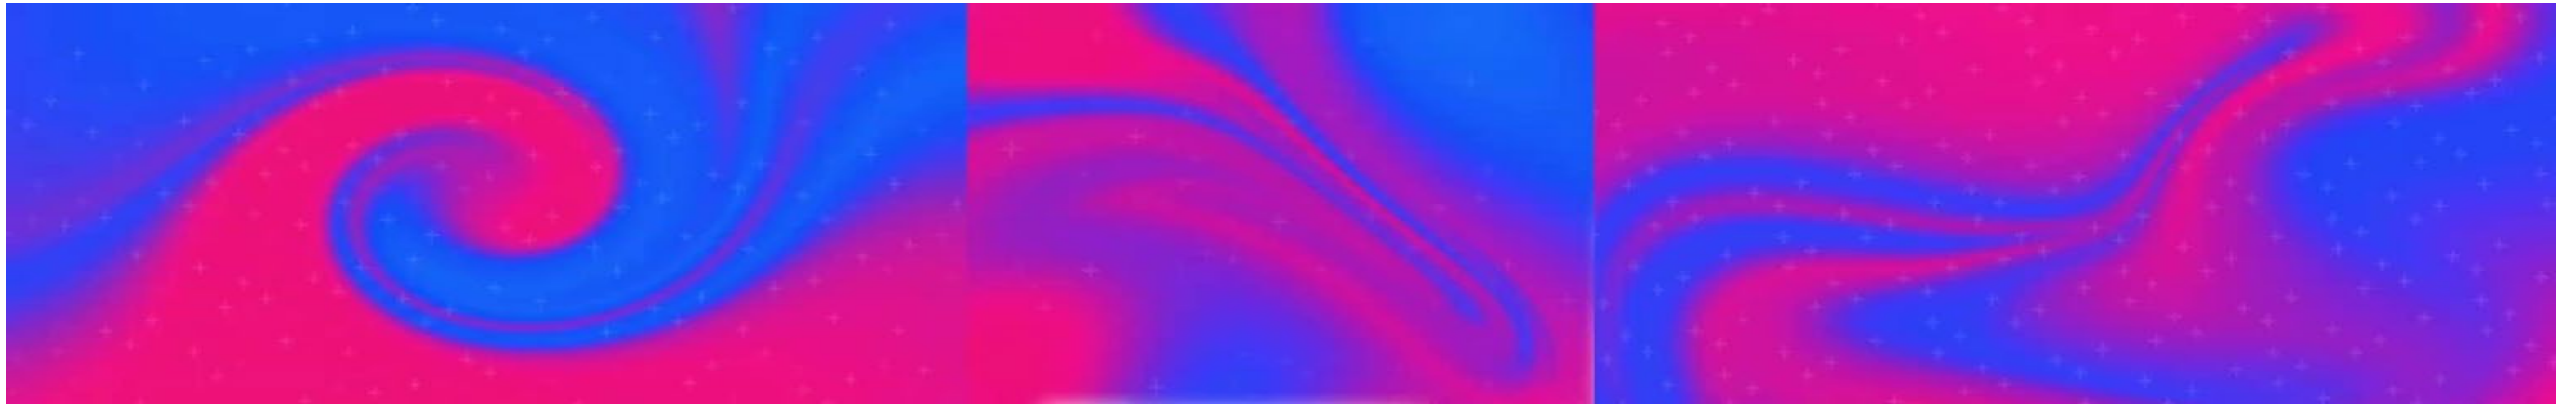

Name badge mockups

Concept A: Gradients

Poster mockups

Concept A (Alternate Idea): Gradients + Constellation

Video demonstration - Click here to download [original video](#).

Addition of Vector plus signs to form constellation effect;
transitions from “day-to-night” at 0:08.

Constellation effect can be used to darken room during presentations or
when additional focus needs to be given to speakers

Current background uses black background with white pluses, but
different colour options can be implemented.

Concept B: Arrows

Venue mockup

Concept B: Arrows

- Leverages arrow design with multi-layered transparent effect to create dynamic movement
- Arrows can be changed to different colours as needed; could represent different workstreams or simply provide visual “pop”
- Arrows would travel at gentle speeds to avoid overwhelming visitors
- Additional arrow animations can be overlaid to add dynamism; can also flow into Vector logo. (See example transition at 0:08 in videos.)
- Name badges are separated into categories via colors, and use subtle arrow patterns for clean and visually appealing designs
- Posters using strictly arrows in dynamic patterns to keep consistent visual design

Concept B: Arrows

Video demonstration
(Click here to download [original video](#))
(transition animation starts at 0:08)

Concept B: Arrows

Video demonstration - with extended wall compensation

(Click here to download [original video](#))

The lower left and right walls of the venue have large cubes that stick out. In the previous video, the arrows might look slightly off crossing over the cubes.

This mockup compensates for this by having a separate animation only on the extended cubes, seen in the lower left and right portions of this video.

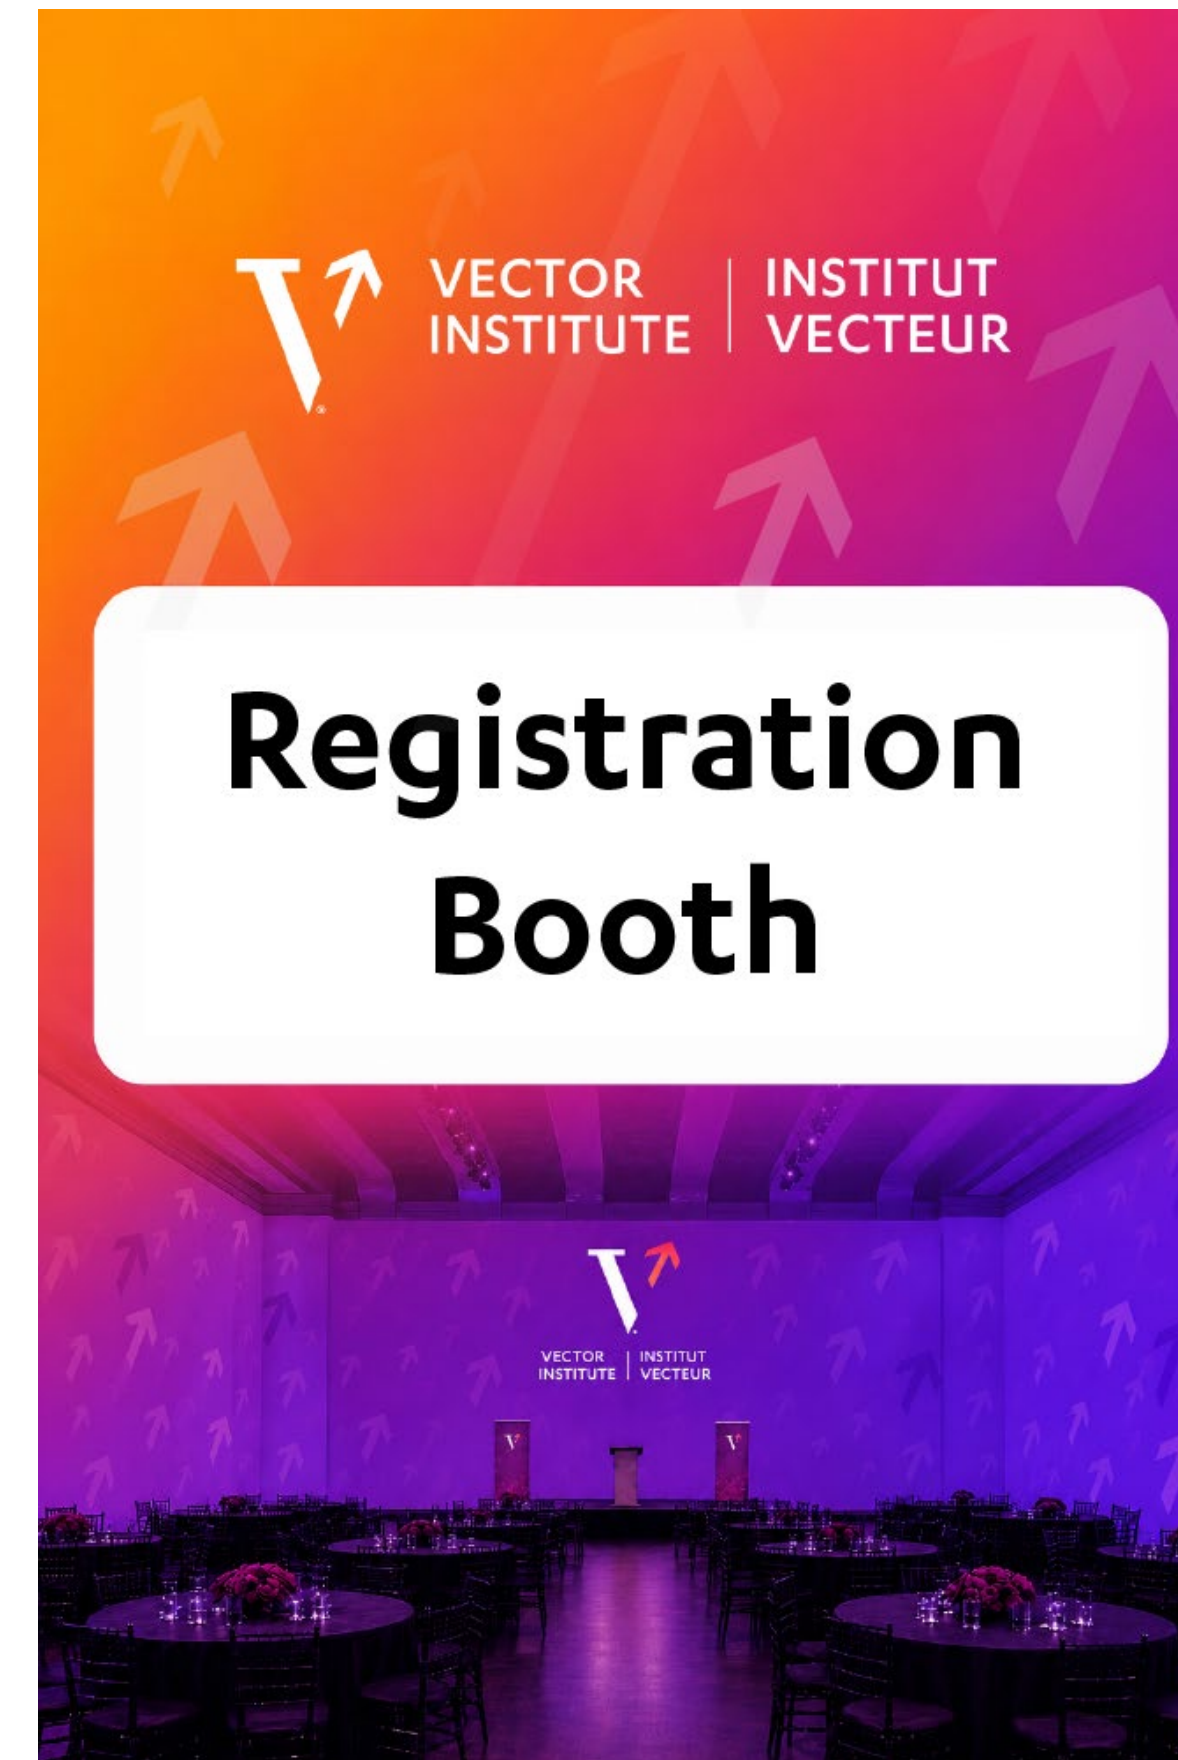

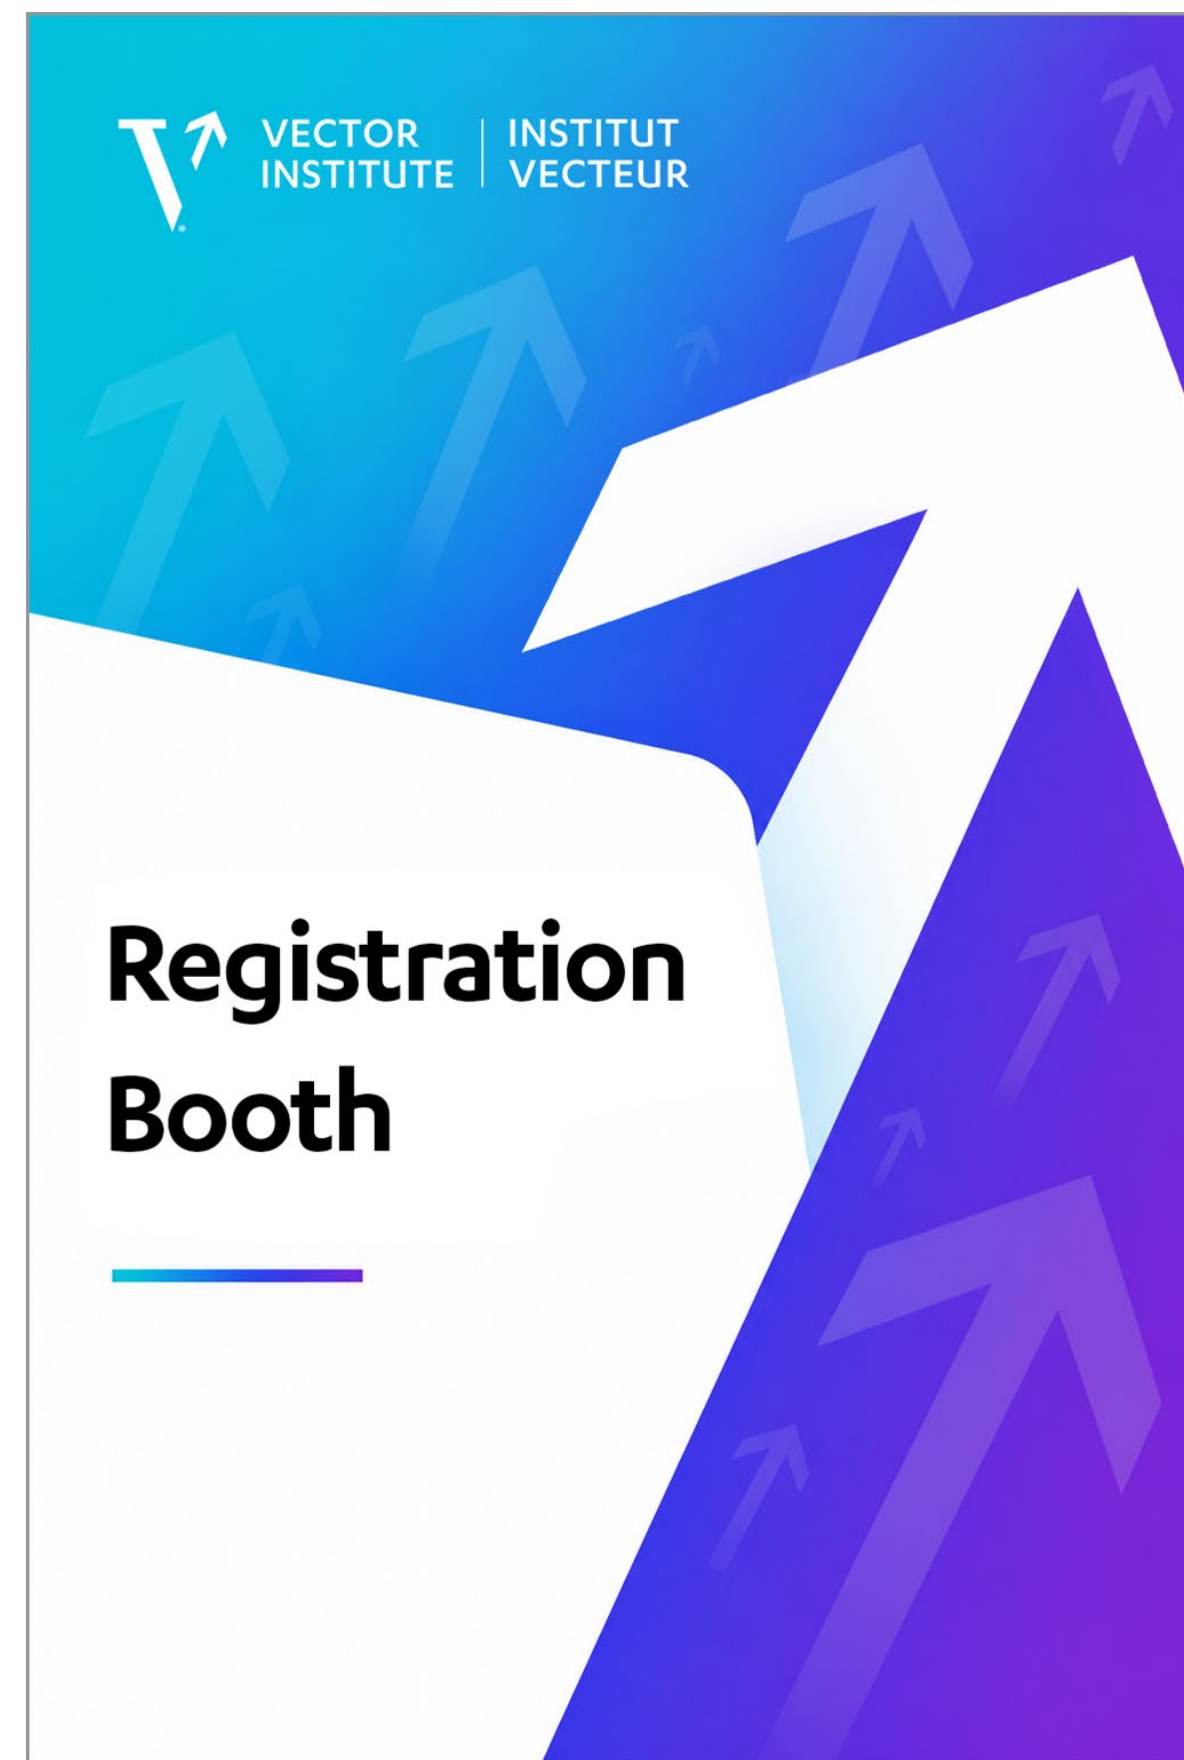

It looks unusual on screen, but will look correct in the venue space.

Concept B: Arrows

Name badge mockups

Concept B: Arrows

Poster mockups

Concept C: Symbol Tapestry

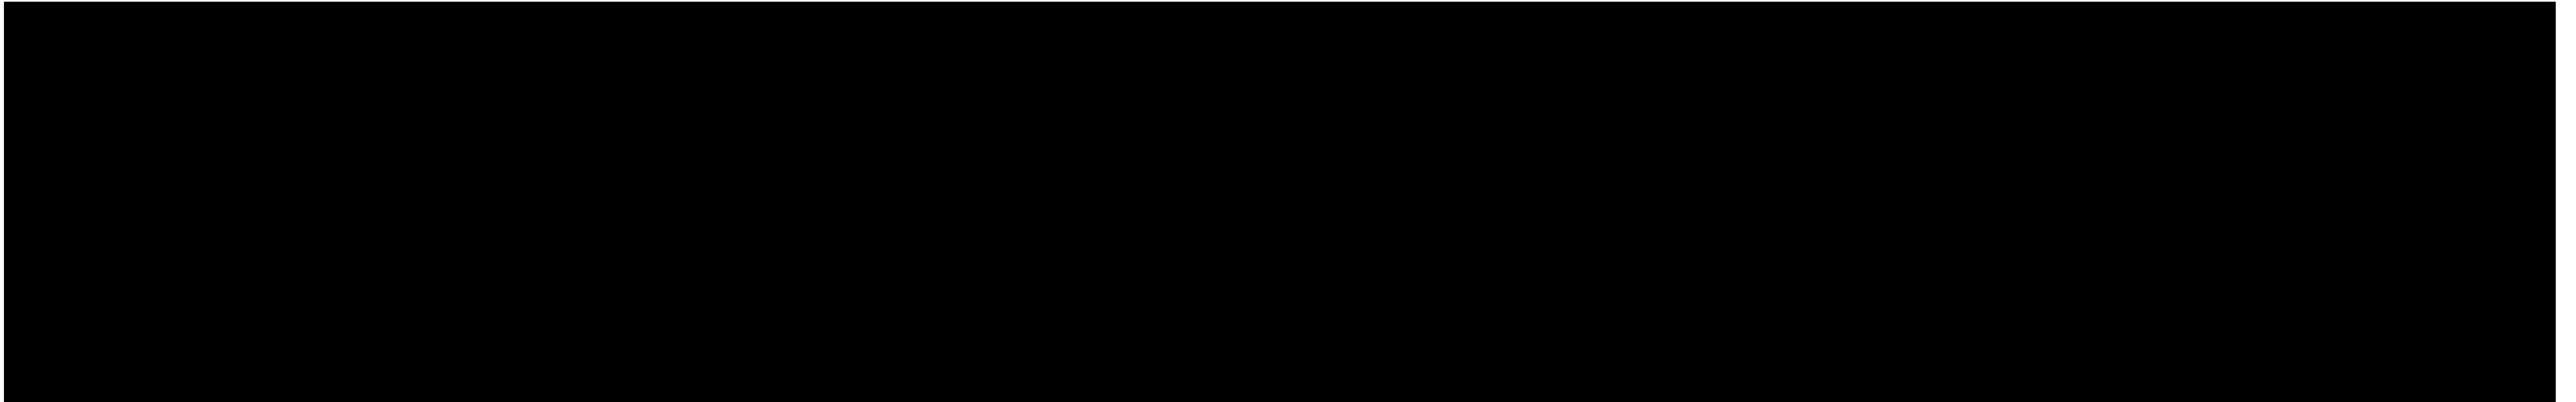

Venue mockup

Concept C: Symbol Tapestry

- Uses flowing symbols, layered elements, and visual effects to produce a glowing tapestry
- Will provide memorable visual centerpiece for immersive experience
- Name badges and posters follow collage-like design and blooming colors aesthetic

Concept C: Symbol Tapestry

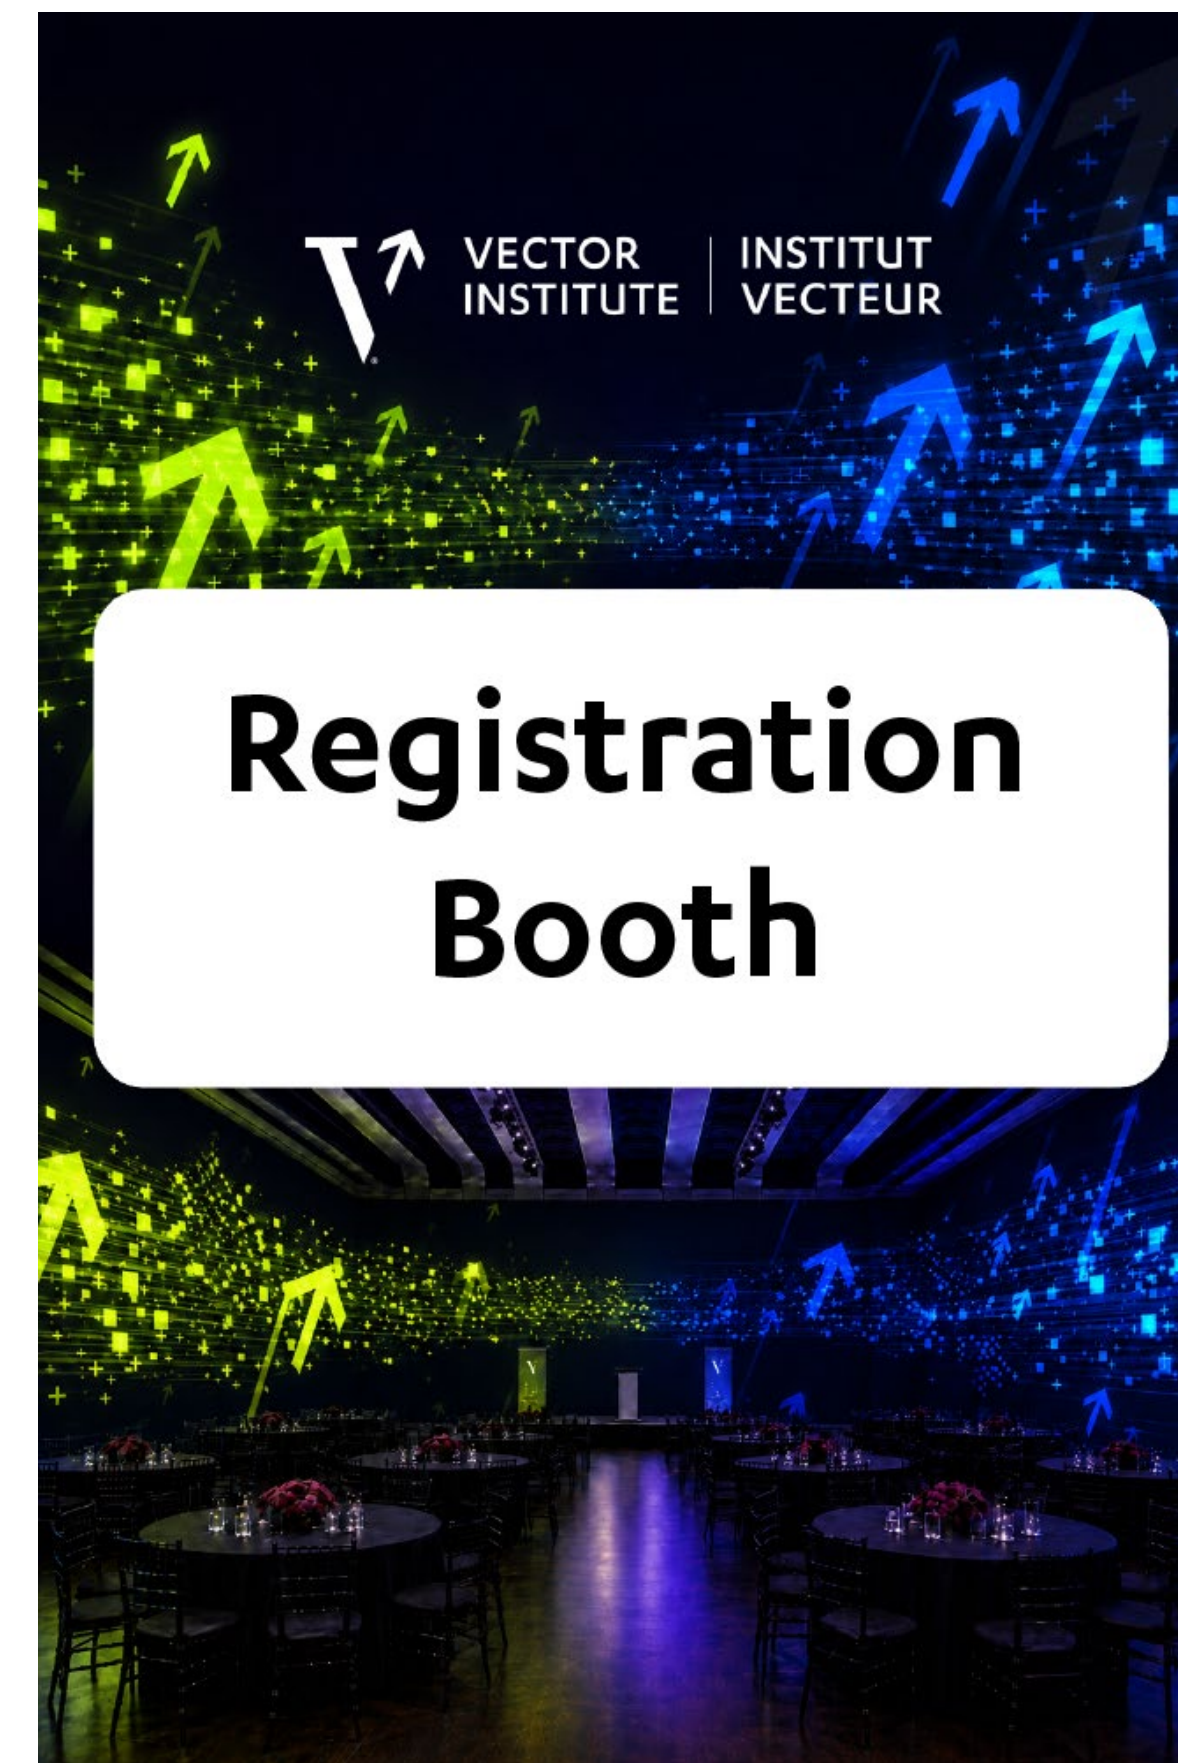

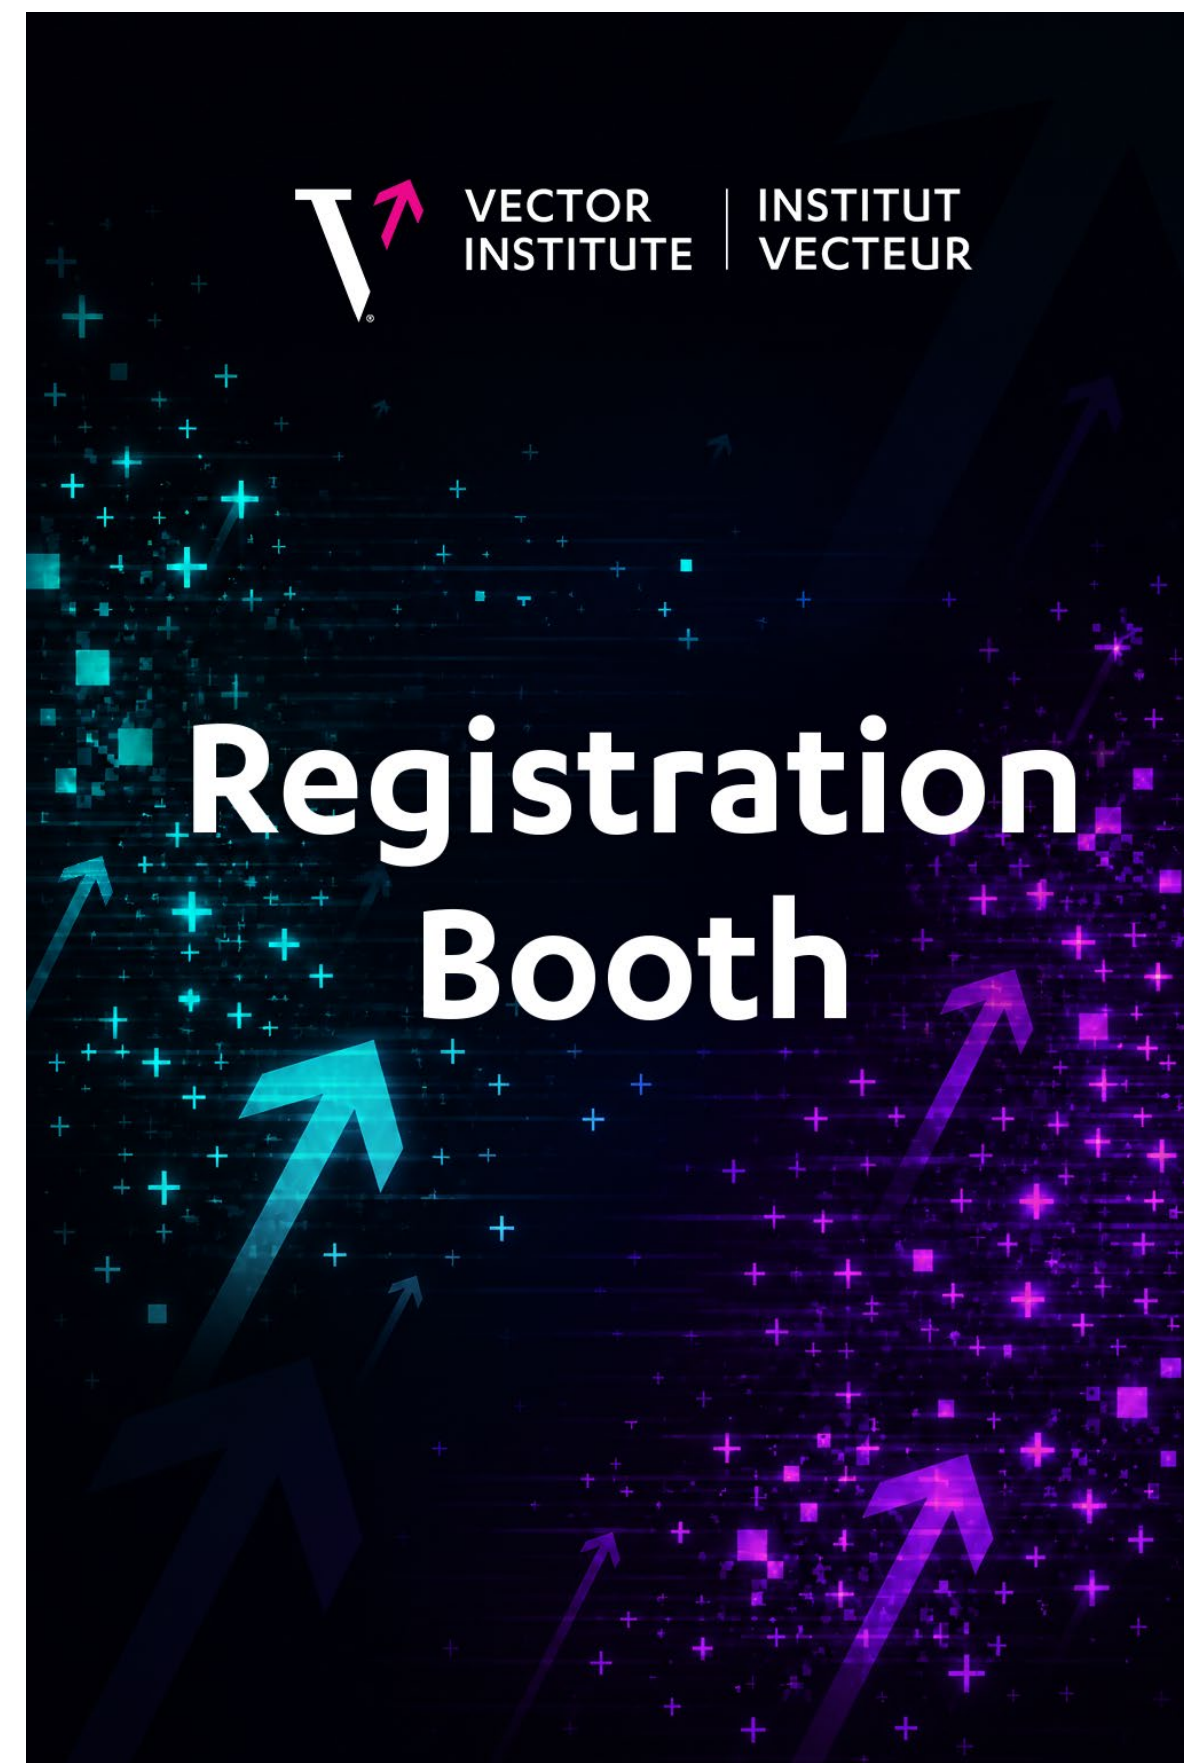

Video demonstration
(Click here to download [original video](#))

Concept C: Symbol Tapestry

Name badge mockups

Concept C: Symbol Tapestry

Poster mockups

Bonus Concept: Pointillism Transition

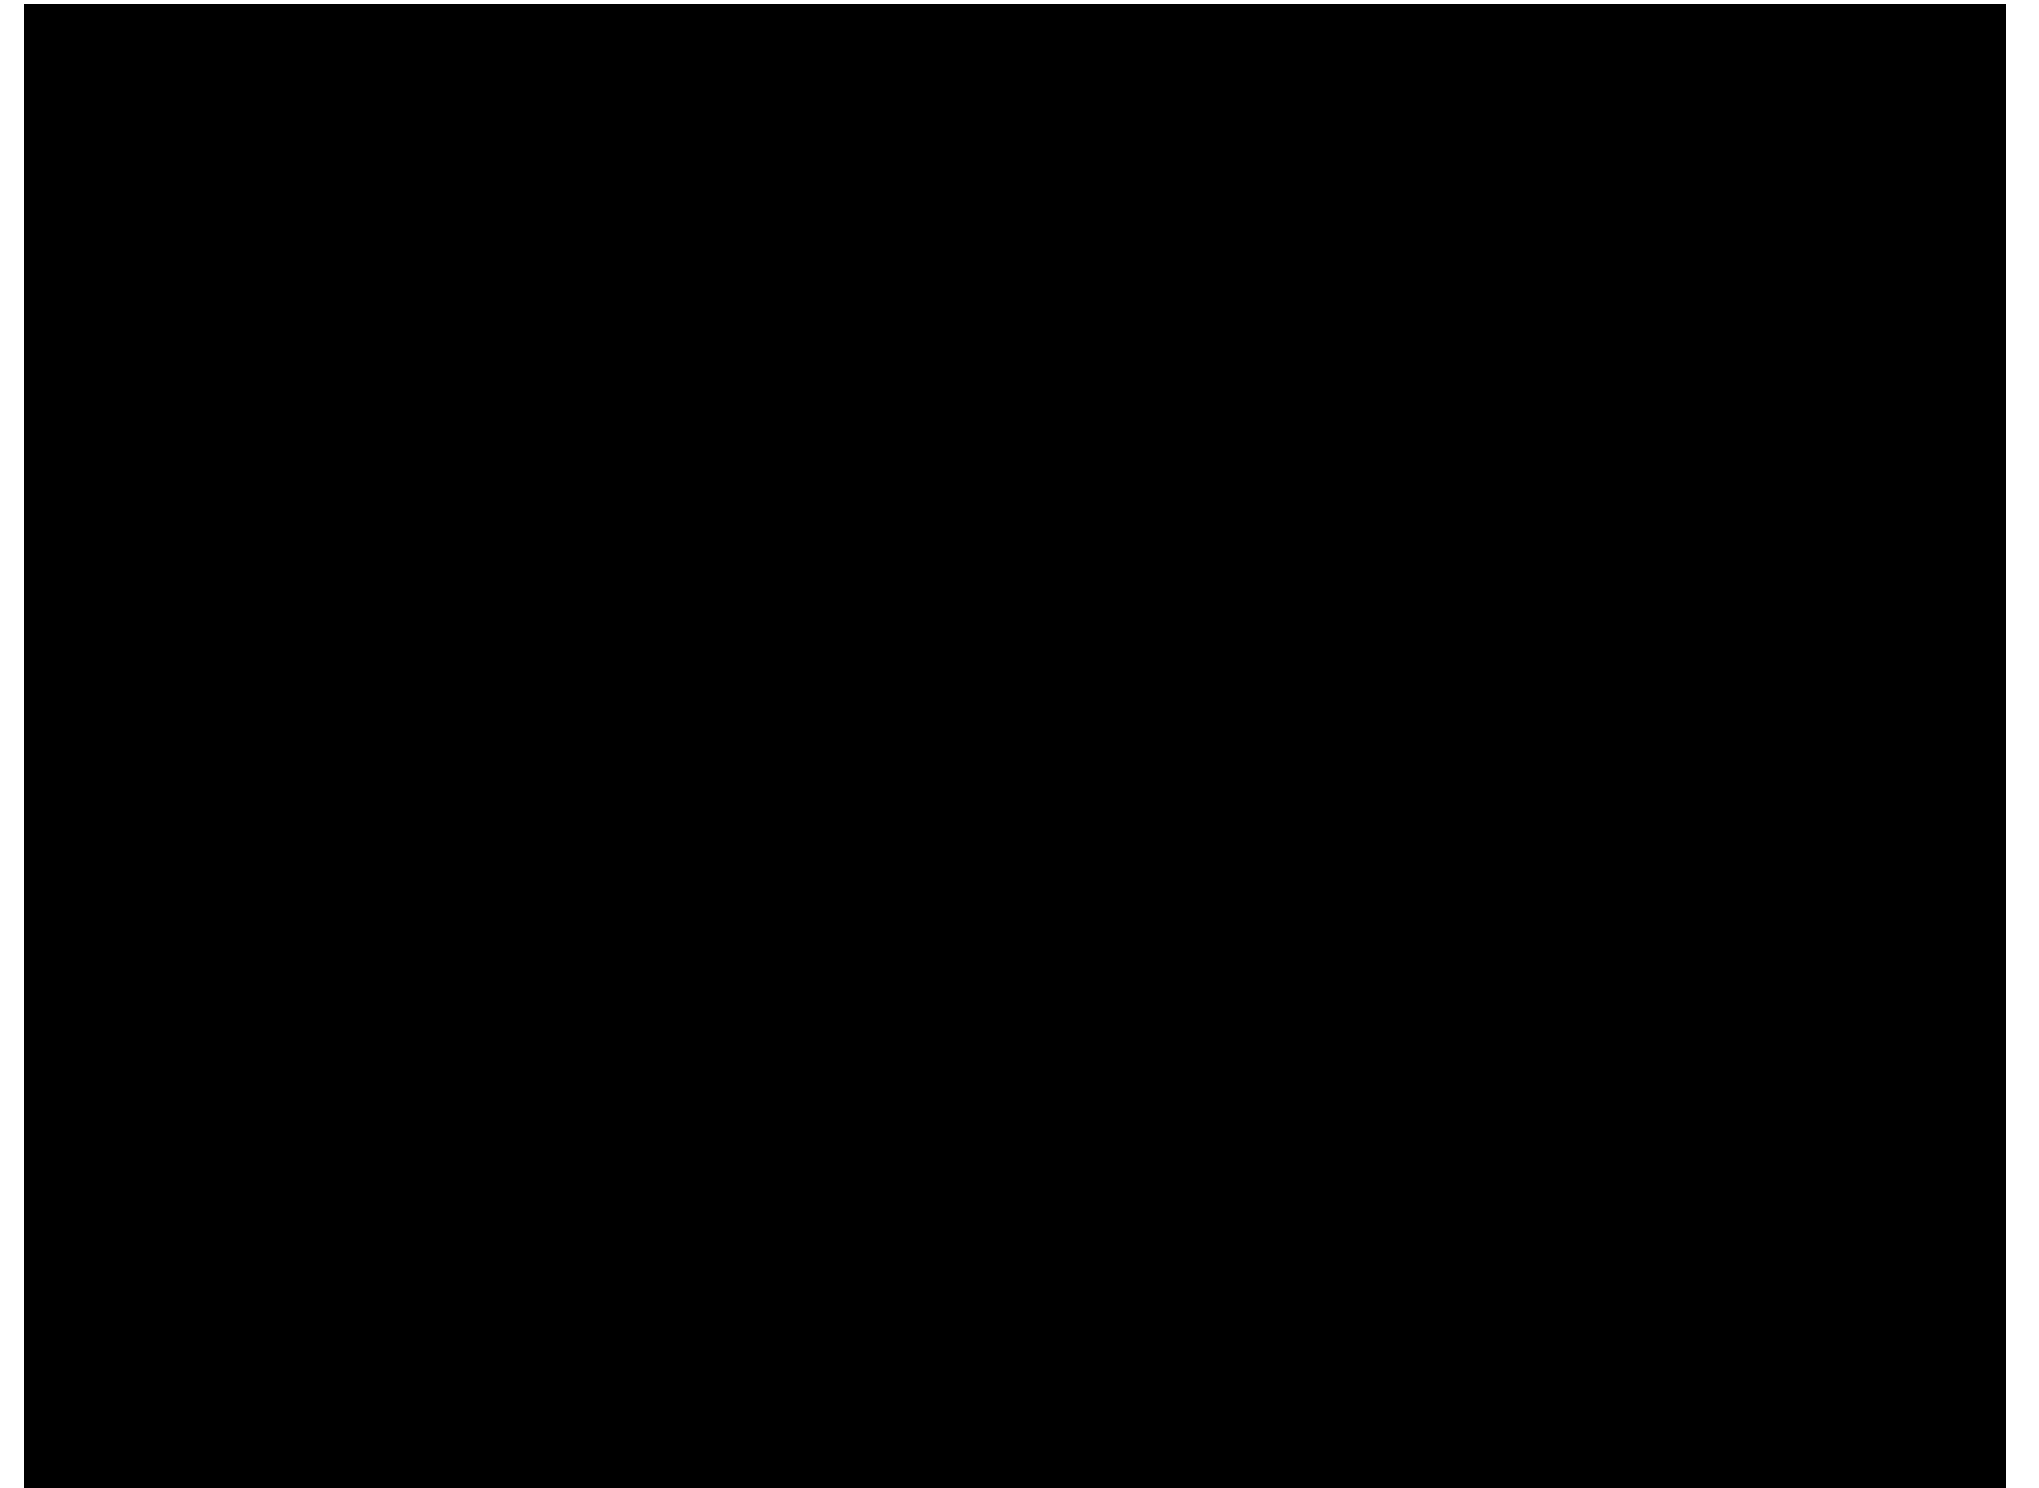

Click here to download [original video](#).

Circles from Vector's map of Canada can be dynamically morphed into different shapes via AI calculation.

Could leverage this for unique animations, or even expanded into its own concept.

Vector logo is provided as example.

(Circle colours are incorrect here, and would be corrected if concept is selected.)

Bonus Mockup: Presentation Projection

Venue mockup showcasing projected presentations
(Projected presentations will be done on all three mockups)

Bonus Mockup: Speakers on Walls

Venue mockup showcasing speaker names on walls
(Speaker names will be applied to all three mockups)

Thank you
